No. 180,565. Fan for Rocking Chairs.  
*Evantail de berceuse.*

Arthur Charles Barratt, Toronto, Ontario, Canada, 27th November, 1917; 6 years. Filed 9th June, 1917. Receipt No. 280,746.

*Claim.*—1. A fan supporting device comprising a pair of rods adapted to be secured at one end to a rocking chair back and provided at their upper ends with forwardly extending portions terminating in hooks, a fan member freely and swingably supported within the hooks, and bracing members extending between the rods in proximity to the extremity of their forwardly directed ends.

2. A fan supporting device comprising a pair of rods adapted to be secured at one end to a rocking chair back and provided at their upper ends with forwardly extending portions terminating in hooks, a fan member freely and swingably supported within the hooks, and adjustable bracing members extending between the rods in proximity to the extremity of their forwardly directed ends.

3. A fan supporting device comprising a pair of rods adapted to be secured at one end to a rocking chair back and provided at their upper ends with forwardly extending portions terminating in hooks, a fan member freely and swingably supported within the hooks, a plate attached to each forwardly extending rod portion and having longitudinal slots located in alignment one with the other, and clamping bolts extending through the aligned slots.

4. A fan supporting device comprising a pair of rods having forwardly directed upper ends, a swingable fan freely supported upon the ends of the forwardly directed portions of the rods, and means for adjustably securing the opposite ends of the rods to a chair back.

5. A fan supporting device comprising a pair of rods having forwardly directed upper ends, a swingable fan freely supported upon the ends of the forwardly directed portions of the rods, a pair of clamping members secured to each rod, and means for securing them in position upon the rod against the upper and lower edge of a chair back crossbar.

6. A fan supporting device comprising a pair of rods having threaded portions, a pair of clamping members secured on each rod, nuts screwed upon the threaded portion of the rod designed to hold the clamping members in contact with the upper and lower edge of a chair back crossbar, a depending swinging fan, and means extending from the aforesaid rods for supporting the fan over and in front of the chair back.
